## SECTION 10: Stability and reactivity

### 10.1 Reactivity

The following applies in general to flammable organic substances and mixtures: in correspondingly fine distribution, when whirled up a dust explosion potential may generally be assumed.

### 10.2 Chemical stability

The product is chemically stable under standard ambient conditions (room temperature) .

### 10.3 Possibility of hazardous reactions

No data available

### 10.4 Conditions to avoid

Heat, flames and sparks. The catalytic properties of this material will promote the oxidation and possible ignition of flammable liquids and vapors. The dehydrogenation of the lower alcohols and compounds such as cyclohexane may readily cause ignition. After use, all

catalysts which contain absorbed hydrogen may ignite when dried in air, especially in the presence of organic material. All used, filtered catalysts should therefore be kept wet and out of contact with combustible liquids and vapors.

no information available

Alcohols, Strong acids, Bases, Oxidizing agents, Palladium undergoes a violent reaction with arsenic

#### **10.6 Hazardous decomposition products**

In the event of fire: see section 5
